LICENSE FEATURES

TouchDesigner/TouchPlayer License Comparison				
Feature	Non-Commercial	Educational	Commercial	Pro
Includes all basic operators	X	X	X	X
Usable in paying projects			X	X
Transferable Keys (computer-to-computer)		X	X	X
Unlimited Resolution	1280x1280 limited	X	X	X
Use Engine COMP in TouchDesigner	X	X	X	X
Use TouchEngine in other applications		X	X	X
Hide splash screen on startup		X	X	X
TouchPlayer hide interface overlay		X	X	X
Includes all Shared Memory OPs		X	X	X
Ouster LIDAR device support		X	X	X
SICK LIDAR device support		X	X	X
Leuze ROD4 laser scanner support		X	X	X
Send and receive textures to DirectX apps		X	X	X
Blob Track TOP number of blobs tracked	unlimited	unlimited	unlimited	unlimited
Video Stream Out TOP to stream RTSP/RTMP/SRT video	X	X	X	X
Export H.264/H.265 movies in realtime with Nvidia GPU		X	X	X
NDI OPs for streaming video over LAN	X	X	X	X
Notch TOP for running Notch blocks (separate Notch license required)		2x Notch Blocks (1920x1080)	2x Notch Blocks (1920x1080)	X
3rd party projector calibration via Viofo TOP or Scalable Display TOP				X
MoSys camera tracking				X
Stype camera tracking				X
Ncam camera tracking with Ncam CHOP / Ncam TOP				X
BlackTrax motion tracking support via BlackTrax CHOP				X
RenderStream support				X
Sync multiple processes or systems via Sync In CHOP / Sync Out CHOP				X
Hardware frame-lock (NVIDIA Gsync / AMD S400 sync cards)				X
Create Private .toe files and components (blocks editing and viewing of networks, but runs on any license).				X
Animation Sequencing (Clip Blender CHOPs)				X
Forum Support	X	X	X	X
Pro Support (6 hours direct support / email / phone)				X
Bug fixes in the specific build you are using				X
TouchDesigner Price	No Charge	\$300 USD	\$600 USD	\$2200 USD
TouchDesigner Floating Cloud Price	N/A	\$450 USD	\$900 USD	\$3300 USD
TouchPlayer Price	No Charge	N/A	\$300 USD	\$800 USD

Paid Features Worth Noting

- Transferable Keys: (Resolved by Educational License)
 - Useful because the system being used to run the software may not be the same every time, depending on location, operator, and availability.
 - Transferable Keys could be helpful if building a repository of shared accounts/subscriptions for the project as a whole.
- Unlimited Resolution: (Resolved by Educational License)
 - The current Non-Commercial License that is being utilized can only go up to 1280x1280, which is far under the projected 6k-8k resolution that the end result of the self-aware room will be using.
- TouchEngine: (Resolved by Educational License)
 - This, seemingly, is the key to building workflows and processes within other programs. TouchEngine is a feature that allows components to be used by various other software. The example used is Unreal Engine; however, it could also prove useful when sending certain media to Qlab, which is the currently used media server for the project.
- Lidar Device Support: (Resolved by Educational License)
 - These are niche features, though; if we have any of the devices developed by these companies, we will have to upgrade subscriptions.
 - OUSTER
 - SICK
- Send and Receive textures to DirectX Apps: (Resolved by Educational License)
 - This is useful primarily for interacting with the digital twin. Depending on what software the team is using, it will be able to directly send or receive live textures utilized by that software.
- Export H.264/H.265 movies in realtime with Nvidia GPU: (Resolved by Educational License)
 - If capturing live video, this is useful for projecting what a camera is seeing when in the room. It can also directly stream video to another source outside TouchDesigner.
- 3rd party projector calibration via [Vioso TOP](#) or [Scalable Display TOP](#) (Resolved by Pro License)
 - This is the feature that may be most pertinent within the Pro license. Though there are workarounds to this.
- Pro Support:
 - Potentially useful down the line. Currently not needed. If it were to ever get to this point, we should likely just build our own application that can handle EVERYTHING at hand.
